

Extracting Content & Images From Your Blackboard Course

The most reliable method for extracting content from Blackboard's text editor, or "description" field, is to simply highlight the text, copy, and then paste it into a word document. Note that you *do not* have to **Edit** the item, simply copy and paste. In most cases, by copying the text into a word document you will also preserve any external web links.

If you have images within this field they will need to be downloaded. You can do this by right clicking on the image and saving it to your computer.
